선택형 문항, 서술형 문항

- 서술형 문항 번호를 임의로 바꾸지 말 것.
- 서술형 답안지에 검정색 혹은 청색 펜으로 작성할 것.
- 글씨체를 단정하고 명확하게 작성할 것.

1. 다음 글의 주제로 가장 적절한 것은? [2.1점]

The history of humankind is filled with skilled and practiced liars. Many are criminals who spin lies and weave deceptive tales to gain unjust rewards. Some are politicians who lie to gain power, or to cling to it. Sometimes people lie to boost their image, while others lie to cover up bad behavior. Even the academic science community—a world largely devoted to the pursuit of truth—has been shown to contain a number of deceivers. But the lies of impostors, swindlers, and boasting politicians are just a sample of the untruths that have characterized human behavior for thousands of years. Lying, it turns out, is something that most of us are very skilled at. We lie with ease, in ways big and small, to strangers, co-workers, friends, and loved ones. Our capacity for lying is as fundamental to us as our need to trust others. Being deceitful is part of our nature, so much so that we might say that to lie is human.

- ☒ ① the widespread and universal occurrence of lying across all humans
- ② the necessity of reducing dishonesty through social systems
- ③ the use of deception by criminals and politicians for personal gain
- ④ the existence of deception within academic communities
- ⑤ the negative effects of dishonesty on social trust

2. 다음 글의 주제로 가장 적절한 것은? [2.1점]

Until recently, urban wildlife was mostly ignored in scientific research. This is partly because such species are considered pests unworthy of our attention—or not wildlife at all. However, according to Seth Magle—director of the Urban Wildlife Institute at Chicago’s Lincoln Park Zoo—we live on a planet that’s rapidly urbanizing. It would therefore be unwise to ignore animals that move into urban landscapes. Magle adds that while much of urban ecology focuses on how to minimize conflicts with these animals, we forget that many of our encounters with wildlife are delightful. For Magle, “Another part of coexisting with animals has to do with celebrating these moments.”

- ① the focus on rural wildlife in scientific research
- ② the role of urban wildlife in reducing conflicts among people in cities
- ☒ ③ the importance of paying attention to urban wildlife and the joy it brings
- ④ the need for further scientific research to control urban wildlife populations
- ⑤ the limitations of urban ecology in reducing conflict and promoting coexistence

3. 밑줄 친 That이 다음 글에서 의미하는 바로 가장 적절한 것은? [2.4점]

Stare into the eyes of *The Watcher*, British artist Sophie Green’s portrait of an African wild dog, and you’ll see there’s something reflected. A triangular outline of a distant mountain perhaps, or maybe a termite mound on the savanna. Something the animal is looking at, in any case, that draws and locks your own gaze. And by the time it does, you realize that the animal is actually now looking at you.

The effect is striking: a strangely intimate moment with one of the planet’s most beleaguered mammals emerging from the shadows. But of course, it’s not really an animal; just a very realistic painting of one.

“That’s always been my aim,” says Green. “I want my artwork to be a window into another ecosystem. So people can feel they’re face to face with the animal, rather than looking through a lens or at just another picture. Most people don’t get that experience unless they go on a safari or an expedition. I kind of want my artwork to be that experience for them.”

- ① Creating artwork that describes the animal in an unrealistic way
- ② Establishing a strong emotional connection between the wild dog and the artist
- ☒ ③ Creating an immersive moment that enables an intimate encounter with the animal
- ④ Encouraging viewers to make a precise guess on what is reflected in the animal’s eyes
- ⑤ Transforming the artwork into an experience where viewers look at the animal through a lens

4. 다음 빈칸에 들어갈 말로 가장 적절한 것은? [3.1점]

Human beings have a tendency of _____. You would have noticed this in how media outlets build up negative stories far more than they build up positive ones as the former kind sell better. The biggest example of this would be the fact that violence and crime may be at historically low levels, yet media reports often lead people to believe otherwise. Such bias often stops you from taking optimal decisions because your fear paralyzes your sense of curiosity and wonder. Take the case of India, one of the most spectacularly diverse countries in the world, that offers everything to the tourist: mountains, beaches, deserts, jungles, culture and a breathtakingly diverse cuisine. Yet, so many western tourists give it the miss because of reports in the mainstream press about the country's poverty, diseases, hunger, beggars and so on. The fact that India is now among the largest economies of the world with its booming technology industry and a global diaspora that is amongst the largest in the world is totally lost on them, as it does not get that much press.

- ① creating positive stories in order to achieve optimal outcomes
- ② attaching more importance to negative happenings than positive ones
- ③ holding biased views about countries that people usually hesitate to visit
- ④ preferring news sources that provide positive stories over negative ones
- ⑤ failing to make optimal decisions about where to travel due to biased media report

5. 다음 글의 내용과 일치하지 않는 것은? [2.9점]

A team of researchers with the North Carolina Urban/Suburban Bear Study is captivated by a deep hollow inside a gnarled silver maple tree. Bear N209, a radio-collared female that's among more than a hundred bears being tracked in a study, hibernated there over the winter, despite the constant rush of vehicles mere feet away.

"These bears still surprise me," Colleen Olfenbittel, the state's black bear biologist, shouts over the din of traffic. She holds a ladder steady as a colleague scrambles inside the tree and measures the den. It's the biggest tree den Olfenbittel has seen in her 23 years of studying black bears. "They're so much more adaptable than we give them credit for."

Indeed, it's hard to imagine that black bears would take so well to living in Asheville. In this city of about 95,000, nestled in the Blue Ridge Mountains, bears shuffle down residential streets in broad daylight and climb onto people's decks and front porches. Some Asheville residents have embraced their furry neighbors, and nearly every person you talk with has a video of their most recent bear encounter.

The advent of the city bear in Asheville and elsewhere stems from a combination of trends, including changes in land use and the tempting buffets available when living near people. These factors have boosted North America's black bear population to nearly 800,000. At the same time, sprawling cities and suburbs have swallowed up large areas of bear habitat, leaving the animals little choice but to adapt to living with human neighbors.

Unfortunately, humans and bears don't always live in harmony—even in open-minded Asheville, where bears have killed pets and injured at least one person in recent years. In 2020, a mother bear defending her cubs attacked Valerie Patenotte's dog, which later died. "We understand everyone has to coexist," says Patenotte as we stand on her back deck overlooking the distant mountains. "We just want more space from bears."

- ① Black bears are described as highly adaptable to urban environments, and one female bear even hibernated near constant traffic noise.
- ② Olfenbittel has studied black bears for more than two decades, and she believes that they can adapt to city environments much better than people usually think.
- ③ As black bears have adapted so well to life in Asheville, residents now encounter them in their neighborhoods, with many even recording these encounters on video.
- ④ The emergence of urban bears in Asheville has driven the abundance of food near residential areas as well as the expansion of cities and suburbs.
- ⑤ Humans and bears do not always coexist peacefully, and in Asheville, bears have attacked pets and at least one person.

6. 다음 글의 내용과 일치하지 않는 것은? [2.5점]

Two decades ago, DePaulo and her colleagues asked 147 adults to note down every instance they lied or tried to mislead someone during one week. The researchers found that the subjects lied on average one or two times a day. Most of these untruths were harmless, intended to hide one's failings or to protect the feelings of others. Some lies were excuses—one person blamed their failure to take out the garbage on not knowing where it needed to go. Yet other lies—such as a claim of being a diplomat's son—were told to present a false image. While these were minor transgressions, DePaulo and other colleagues observed [in a later study] that most people have, at some point, told one or more "serious lies": hiding an affair from a husband or wife, for example, or making false claims on a college application.

That human beings should universally possess a talent for deceiving one another shouldn't surprise us. Researchers speculate that lying as a behavior arose not long after the emergence of language. The ability to manipulate others without using physical force may have helped us compete for resources—something similar to the evolution of deceptive strategies like camouflage in the animal kingdom. "Lying is so easy compared to other ways of gaining power," notes ethicist Sissela Bok. "It's much easier to lie in order to get somebody's money or wealth than to hit them over the head or rob a bank."

- ① In the research, most untruths were not intended to harm but rather to hide personal failings or protect others emotionally.
- ② It was observed that serious lies are uncommon, as most people seldom engage in major deception.
- ③ Lying is a common trait shared by humans, and researchers think that it developed shortly after language emerged.
- ④ The ability to deceive others may have helped humans secure resources, similar to the development of deception in animals.
- ⑤ Lying is presented as an easier way to gain wealth than using violence or committing a crime.

[7. 서술형1] 다음 글을 읽고, 물음에 답하십시오.

Much of the knowledge we use to navigate the world comes from what others tell us. Without the implicit trust that we place in human communication, we would be paralyzed as individuals and cease to have social relationships. "We get so much from believing, and there's relatively little harm when we occasionally get duped," says Tim Levine, a psychologist at the University of Alabama. In other words, _____.

Because we are programmed to trust, we are naturally gullible. "If you say to someone, 'I am a pilot,' they are not sitting there thinking: 'Maybe he's not a pilot. Why would he say he's a pilot?' They don't think that way," says Frank Abagnale, Jr. Now a security consultant, Abagnale's cons as a young man—including forging checks and pretending to be an airline pilot—inspired the 2002 movie *Catch Me If You Can*. "This is why scams work," he says. "When the phone rings and the caller ID says it's the Internal Revenue Service, people automatically believe it is the IRS. They don't realize that someone could manipulate the caller ID."

7. 위글의 빈칸에 들어갈 말로 가장 적절한 것은? [2.4점]

- ① scams take advantage of people's lack of confidence in others
- ② the advantages of trust outweigh the risks of occasional deception
- ③ social interaction can be sustained without depending on mutual trust
- ④ our understanding of the world no longer comes from what others tell us
- ⑤ the occasional harm caused by deception exceeds the benefits of believing others

[서술형1]

8. 다음 글의 내용과 일치하지 않는 것은? [2.9점]

Like coyotes and bears, raccoons are expanding throughout North American cities. In Washington, D.C., wildlife researchers Kate Ritzel and Travis Gallo wanted to find out whether raccoons living in the city are bolder and more willing to take risks than those in rural areas. They measured this by observing a raccoon's readiness to investigate an unfamiliar object—in this case, bait buried inside a square of wooden stakes.

The researchers installed more than a hundred automatic cameras throughout the city and rural areas of neighboring Virginia. On a muggy September morning at Fort Totten, Gallo placed the smelly bait—"dead animals in a jar," he called it—while Ritzel strapped a camera to a nearby tree. She would check the videos every two weeks to see which animals had passed through. Her favorite video? A feisty raccoon chasing off a fox.

Months later, Ritzel's data indicated that urban raccoons are bolder and more exploratory than their country cousins, taking more time to investigate unusual objects. City raccoons are also more social, traveling in pairs more often than their rural, more territorial counterparts—suggesting that urban raccoons are adapting their behavior to city life.

- ① Raccoons are not the only animals that expand throughout North American cities.
- ② Smelly bait was used in the research as an unfamiliar object, which was buried inside a square of wooden stakes.
- ③ The researchers set up cameras in both urban and rural areas to monitor passing animals and checked the videos regularly.
- ④ Urban raccoons are compared with their rural counterparts, with rural raccoons taking more time to investigate unfamiliar objects.
- ⑤ Rural raccoons are more territorial than urban ones, while urban raccoons are more social and more likely to move in pairs.

9. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은? [3.2점]

Of course, not all innovations in training and equipment corrupt the game.

The difference between a sport and a spectacle is the difference between real basketball and "trampoline basketball," in which players can launch themselves high above the basket and dunk the ball; it is the difference between real wrestling and the version staged by the World Wrestling Federation (WWF), in which wrestlers attack their opponents with folding chairs. (㉠) Spectacles, by isolating and exaggerating through artifice an attention-grabbing feature of a sport, diminish the value of the natural talents and gifts that the greatest players display. (㉡) In a game that allowed basketball players to use a trampoline, Michael Jordan's athleticism would no longer stand out. (㉢) Some, like baseball gloves and graphite tennis rackets, improve it. (㉣) How can we distinguish changes that improve from those that corrupt? (㉤) The answer depends on the nature of the sport, and on whether the new technology highlights or obscures the talents and skills that distinguish the best players.

*spectacle 장관, 볼거리 **artifice 인위적 수단
athleticism 운동 능력 *obscure 흐리게 하다

10. 다음 글의 제목으로 가장 적절한 것은? [2.2점]

Kids get better at lying with age. What drives this increase in lying sophistication is the development of a child's ability to put himself or herself in someone else's shoes. Known as "theory of mind," this is the facility we acquire for understanding the beliefs, intentions, and knowledge of others. Also fundamental to lying is the brain's executive function: the abilities required for planning, making decisions, and self-control. This explains why the two-year-olds who lied and lied well in Lee's experiments performed better on tests of theory of mind and executive function than those who didn't.

- ① Differences in Morality Between Honest and Dishonest Humans
- ② Cognitive Abilities Behind the Growing Sophistication of Children's Lies
- ③ The Impact of Emotional Changes on Children's Increase in Lying Behavior
- ④ The Role of Social Relationship in the Development of Children's Cognition
- ⑤ Changes in the Parent-Child Interaction as Children Become Better at Lying

[11, 서술형2] 다음 글을 읽고, 물음에 답하십시오.

When zoologist Sarah Benson-Amram first started looking into raccoon behavior and cognition about a decade ago, she figured such a common species would have been studied thoroughly. After all, the bushy-tailed omnivores are pop culture icons, jokingly dubbed trash pandas.

- (A) After the animals figured out how to get the food, the researchers would switch the buttons and pedals, forcing them to tweak their strategy.
- (B) So far, she says, her research has confirmed the raccoon's clever and quick-witted reputation. In an experiment called reversal learning, she presented raccoons with a box equipped with a button or foot pedal that, when pressed, released food.
- (C) Instead, Benson-Amram was shocked to find almost nothing in the scientific literature. A few researchers in the early 1900s had tried to study the clever animals, but gave up when their subjects kept breaking out of their cages.

Most of the raccoons were able to solve the problem on the first night. To put that into perspective, only one of six coyotes engaged with the box—and not until the 44th night of testing.

11. 주어진 글 사이에 들어갈 글의 순서로 가장 적절한 것은? [2.5점]

(가) had to / their previous strategy
(나) their behavior / quickly
- 2) 필요시 단어를 추가하십시오.

[12-13] 다음 글을 읽고, 물음에 답하십시오.

Researchers are now learning that we are prone to believe some lies even when they're clearly contradicted by evidence. These insights suggest that our skill at deceiving others—combined with our vulnerability to being deceived—(a)is especially consequential in the age of social media. Research has shown, for example, that we are especially prone to accepting lies that (b)affirm our worldview. False news stories thrive on the internet and in social media because of this vulnerability, and disproving them does not tend to lessen their power. This is because people assess the evidence (c)presented to them through a framework of preexisting beliefs and prejudices, says George Lakoff, a cognitive linguist at the University of California, Berkeley. “If a fact comes in (d)that doesn't fit into your frame, you'll either not notice it, or ignore it, or ridicule it, or be puzzled by it—or attack it if it's threatening.” What then might be the best way to impede the rapid advance of untruths into our collective lives? The answer isn't clear. Technology has opened up a new frontier for deceit, (e)adds a 21st-century twist to the age-old conflict between our lying and trusting selves.

12. 윗글의 밑줄 친 부분 중 어법상 틀린 것은? [2.9점]
- ① (a) ② (b) ③ (c) ④ (d) ⑤ ~~(e)~~
13. 윗글의 내용과 일치하는 것은? [2.2점]
- ① Contradictory evidence to false information prevents people from believing it.
- ② False news struggles to spread online because users critically evaluate information.
- ③ Preexisting beliefs and biases shape how people assess the information presented to them.
- ④ People readily accept facts that conflict with their existing worldview.
- ⑤ Technology has made it harder for deceit to occur by increasing accuracy of information.

제 1학년 전체 2026년 4월 28일 2교시

[14, 서술형3] 다음 글을 읽고, 물음에 답하십시오.

To study lying in children, Lee and his colleagues use a simple experiment. They ask kids to guess the identity of hidden toys, based only on an audio clue. For the first few toys, the clue is obvious—a bark for a dog, a meow for a cat—and the children answer easily. Then they play a sound that has nothing to do with the toy. “So you play Beethoven, but the toy’s a car,” Lee explains. The experimenter leaves the room pretending to take a phone call—a lie for the sake of science—and asks the child not to peek at the toy. Returning, the experimenter asks the child for the answer, then follows up with the question: “Did you peek?”

Using hidden cameras, Lee and his researchers have discovered that the majority of children can’t resist peeking. As (가)_____, (나)_____. Among two-year-olds who peek, only about one third lie about it. Among three-year-olds, half lie. And by age eight, approximately 80 percent claim they didn’t peek.

Kids also get better at lying as (가)_____. When asked to guess the identity of the toy that they have secretly looked at, three- and four-year-olds typically give the right answer straightaway—they don’t realize that this reveals that they cheated. At seven or eight, kids learn to deliberately give a wrong answer at first, or they try to make their answer seem like a reasoned guess.

Five- and six-year-old kids fall in between. In one study, Lee used a Barney The Dinosaur toy. One five-year-old girl denied that she had looked at the toy, which was hidden under a cloth. Then she told Lee she wanted to feel it before guessing. “So she puts her hand underneath the cloth, closes her eyes, and says, ‘Ah, I know: it’s Barney,’” Lee recalls. “I ask, ‘Why?’ She says, ‘Because it feels purple.’”

[서술형3]

윗글의 각 빈칸 (가)와 (나)에 들어갈 말을 <조건>에 맞춰 쓰시오.
[가] 3점, (나) 4점 총 7점]

<조건>

- 1) (가)에 비교급 표현을 사용해 세 단어 이상 쓰시오.
- 2) (나)에 peek, likelihood, lie를 포함하시오(필요시 형태 변형).
- 3) (나)에 동사를 하나 추가하십시오.

(가): they became older
(나): the likelihood of lying about peeking increased

● 다음 장에서 이어집니다.

14. 윗글의 내용과 일치하지 않는 것은? [2.8점]

- ① Children are asked to identify hidden toys using only sound cues, which are initially obvious but later become unrelated to the actual object.
- ② The child is told not to look at the toy while the researcher is away, and is later questioned about both the toy and their behavior.
- ③ After secretly seeing the toy, three- and four-year-olds usually reveal their dishonesty by giving the correct answer right away.
- ④ At seven or eight, kids become more sophisticated in lying, making their answers more believable.
- ⑤ The five-year-old girl was able to fully conceal her cheating, showing that children at this age lie as skillfully as older children.

15. 다음 글의 제목으로 가장 적절한 것은? [2.7점]

Consider an experiment in which neuroscientists invited volunteers to have their brain scanned while they underwent a series of activities. First they read loving messages from close friends and family, such as "Whenever I am completely lost, you are the person I turn to" and "I love you more than anything in the world." In the second part of the experiment, the volunteers sometimes held a warm pack and other times squeezed a rubber ball. Volunteers reported feeling warmer when they read the loving messages than when they read neutral ones like "You have curly hair" and "I have known you for ten years." They also reported feeling more socially connected when they held the warm pack than when they squeezed the ball.

- ① How Language Influences Social Connection
- ② How Low Temperature Could Affect Brain Activity
- ③ The Connection Between Physical and Social Warmth
- ④ The Effects of Receiving Positive Messages from Others
- ⑤ The Difference Between Neutral and Emotional Messages

제 1학년 전체 2026년 4월 28일 2교시

[16-17] 다음 글을 읽고, 물음에 답하십시오.

While black bears have reclaimed about half their former range and now live in some 40 states, coyotes have taken the U.S. by storm in recent decades. They now can be found in every state except Hawaii, and in most major cities. The metropolis most synonymous with the urban coyote is Chicago, home to as many as 4,000 of the animals.

Stan Gehrt, a wildlife ecologist with Ohio State University and the Max McGraw Wildlife Foundation, began studying Chicago's coyotes in 2000, not long after the animals started showing up there. Back then, Gehrt thought his project would last a year. More than two decades later, he's still at it. "We consistently underestimate this animal and its ability to adjust and adapt," Gehrt says. "They push the boundaries of what we perceive to be constraints."

At the beginning of Gehrt's research, he thought coyotes would be restricted to parks and green spaces, but he was wrong. "Now we have coyotes everywhere—every neighborhood, every suburban city, and downtown."

Indeed, coyotes have succeeded despite our best efforts to eradicate them. At least 400,000 are killed each year, about 80,000 by a federal predator control. Vehicle strikes are the main cause of death for Chicago's coyotes, but the animals have learned to avoid cars and can even read stoplights. Adding to their adaptability is their flexible diet. Coyotes will eat just about anything, from shoe leather to fruit (they can climb fruit trees). According to Gehrt, "Variability is the primary pattern."

16. 뒷글의 내용과 일치하는 것은? [2.5점]

- ① Black bears and coyotes are compared in terms of their geographic range, with coyotes showing only a partial recovery of their former range and rarely appearing in the U.S.
- ② Chicago is considered the only city in the U.S. where urban coyotes are found, with around 4,000 of them living there.
- ③ As Gehrt initially expected, his study lasted for more than 20 years as coyotes adapted very well to the city.
- ④ The dangers of city traffic have contributed to the decline in the coyote population, as they have not been able to develop strategies to deal with these threats.
- ⑤ Coyotes' flexible diet has contributed to their successful adaptation to urban environments, with dietary variability being a key factor.

17. 밑줄 친 They push the boundaries of what we perceive to be constraints가 뒷글에서 의미하는 바로 가장 적절한 것은?

[2.8점]

- ① Coyotes can survive and adapt beyond the limits that people think would make survival difficult for them.
- ② Coyotes can thrive mainly because of their natural traits, without needing to adapt further.
- ③ Coyotes struggle to thrive because urban environments have too many constraints.
- ④ Coyotes can expand their living space by competing with rural animals.
- ⑤ Coyotes survive by staying away from areas where people live.

18. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? [3.5점]

Chickens live communally. Songbirds do not, but they still live within a dominance hierarchy. It's just spread out over more territory. The wildest, strongest, healthiest birds occupy prime territory, and defend it.

- (A) If an infectious avian disease sweeps through a neighborhood of well-stratified songbirds, it is the least dominant and most stressed birds who are most likely to get sick and die. This is equally true of human neighborhoods, when bird flu viruses and other illnesses sweep across the planet.
- (B) Because of this, they are more likely to attract high-quality mates, and to produce chicks who survive and thrive. Protection from wind, rain and predators makes for a much less stressed existence. Territory matters, and there is little difference between territorial rights and social status. Also, it is often a matter of life and death.
- (C) The poor and stressed always die first, and in greater numbers. They are also much more vulnerable to non-infectious diseases, such as cancer and heart disease. When the upper class catches a cold, as it is said, the working class dies of pneumonia.

*communally 공동으로 **avian 조류의
stratified 계층화된 *pneumonia 폐렴

- ① (A) - (C) - (B) ② (B) - (A) - (C)
- ③ (B) - (C) - (A) ④ (C) - (A) - (B)
- ⑤ (C) - (B) - (A)

공통영어1과 제 1학기 중간고사 문제지

제 1학년 전체 2026년 4월 28일 2교시

[19, 서술형4] 다음 글을 읽고 물음에 답하십시오.

Green's 14-piece exhibition-entitled Impermanence: The Art of Conservation-was initially envisioned to feature only polar animals, but Green says she quickly realized she was painting herself into a corner-conservation issues, human encroachment, and climate change affect animals all over the world, so she started to branch out. Hence images of balletic humpbacks, a great white shark, penguins, an African lion-and that African wild dog, amongst others.

Green claims that her art is not rooted in creativity. "I'm quite detail-focused: it's just my personality type, which influences my art. I would say I'm more analytical. I prefer something to be exact and precise."

She says she paints in acrylic and adds that it's an unusual medium in hyper-realism. "It dries very quickly, but weirdly I prefer that," she says. "The way I build depth is with layer after layer after layer, and I do it quickly. It creates more of a depth perception."

This lends itself to the hyper-real quality of her exhibits. "In watercolor, you work light to dark; you work dark to light in oil and acrylic. It's less a physical thing, more of a light perception. Light value on top of dark values kind of gives the impression of being in three dimensions."

Green adds that hope is an embedded theme in her collections and is also the source of her collection's ambiguous title.

"The name 'impermanence' is open to interpretation-it kind of implies the impermanence of certain species and ecosystems," she says. "But it could also represent the impermanence of our problems. @There's a dark side, but there can also be a light side."

19. 윗글의 내용과 일치하지 않는 것은? [3.0점]

- ① Realizing that focusing only on polar animals would limit her message, Green began to include a wider variety of animals.
- ② Green describes her art as being influenced more by her detail-oriented and analytical personality than by creativity.
- ③ Green uses acrylic paint, which dries quickly, and creates a depth perception by building up multiple layers.
- ④ According to Green, watercolor and acrylic differ in technique, as acrylic painting typically proceeds from light to dark, unlike watercolor.
- ⑤ Green explains that adding light value on top of dark ones creates a feeling of three dimensions.

[서술형4]

윗글의 밑줄 친 ㉓의 의미를 다음과 같이 설명하고자 할 때, 각 빈칸 (가)와 (나)에 들어갈 말을 <조건>에 맞춰 쓰시오. [총 6점]

Due to the name's ambiguity, two interpretations are possible. On one hand, as (가) species and ecosystems [3점], it can have a negative meaning. On the other hand, it can have a positive meaning as (나) problems will be [3점].

<조건>

- 1) (가), (나)에 주어진 표현을 포함하시오(그대로 쓸 것).
problems / species and ecosystems
/ the dark side / the light side
- 2) 필요 시 단어를 추가하십시오.

20. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? [3.7점]

Sound can reach the inner ear by way of two separate paths, and those paths in turn affect what we perceive. Air-conducted sound is transmitted from the surrounding environment through the external auditory canal, eardrum and middle ear to the cochlea.

(A) Sound also travels from your vocal cords and other structures directly to the cochlea, and the mechanical properties of your head enhance its deeper, lower-frequency vibrations. The voice you hear when you speak is the combination of sound carried along both paths.

(B) However, when you listen to a recording of yourself speaking, the bone-conducted pathway that you consider part of your "normal" voice is eliminated, and you hear only the air-conducted component. This explains why recordings of your voice sound unfamiliar.

(C) On the other hand, bone-conducted sound reaches the cochlea directly through the tissues of the head. When you speak, sound energy spreads in the air around you and reaches your cochlea through your external ear by air conduction.

*conduct (소리·열·전기를) 전도하다
external auditory canal 외이도 *cochlea 달팽이관
****frequency 주파수

- ① (A) - (C) - (B) ② (B) - (A) - (C)
- ③ (B) - (C) - (A) ④ (C) - (A) - (B)
- ⑤ (C) - (B) - (A)

21. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은? [2.6점]

Christopher Schell, an urban ecologist at the University of California, Berkeley, and Julie Young, a wildlife biologist with the U.S. Department of Agriculture, ①studying how various diets given to captive coyotes could change the animals' behavior. Their hypothesis is that the coyotes eating human food will become bolder around people, ②which is supported by some anecdotal evidence. Schell and Young theorize ③that a coyote that eats processed cereal, for instance, will be hungrier and look for food much more frequently. In contrast, ④one that eats a nutrition-dense rabbit for breakfast will be less hungry and search for food less often. Though Gehrt has not noticed such a connection in Chicago coyotes, he notes that a reliance on human food does bring coyotes closer to restaurants and homes. ⑤leading to more contact and conflict with people and their pets.

22. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은? [3.0점]

Knowledge is not always helpful to creativity, however.

One cannot think creatively in the absence of knowledge. One cannot go beyond the current state of knowledge if one is unaware of what that state is. Often, students have ideas that are creative but only with respect to themselves. (①) The ideas are not also creative with respect to the current state of a given field because others previously have had the same ideas. (②) Individuals with a more substantial knowledge base can show creativity in ways that others who are still acquiring the basic knowledge of the field cannot be. (③) People with an expert level of knowledge can display tunnel vision, a narrowed field of thinking, and just plain entrenchment. (④) Experts can become trapped in a particular way of thinking. (⑤) They may become unable to go beyond that way of thinking. The greatest risk occurs when an individual believes he knows all there is to know. He or she is unlikely ever to show truly meaningful creativity again.

*entrenchment: 고착화

[서술형5]

<예시>를 참고해 아래 문장 1과 2를 <조건>에 맞춰 완성하십시오. [총 4점]

<예시>
I have a plan + of _____-ing (on the right foot)

답안 : I have a plan of starting my day on the right foot.

<조건>

- 1) 문장을 완성하기 위해 동격의 of + -ing 형태를 사용하십시오.
- 2) 답안에 괄호에 있는 어휘를 포함하십시오.
- 3) 주어진 부분을 포함하여 완전한 문장으로 쓰시오.

1. He hates the feeling + of _____-ing (comfort zone) [2점]
2. I have a fear + of _____-ing (ridiculed) [2점]

[서술형6]

<예시>를 참고해 아래 문장 1과 2를 <조건>에 맞춰 완성하십시오. [총 8점]

<예시>
One team lost energy in the first half of the game, _____ (sustained).

답안 : while the other team sustained energy until the end.

<조건>

- 1) 접속사 while 또는 whereas를 사용하십시오.
- 2) 답안에 괄호 안에 있는 어휘를 포함하십시오.
- 3) 주어진 부분을 포함하여 완전한 문장으로 쓰시오.

1. I like the taste of mango with sticky rice, _____ (distasteful). [4점]
2. Their company's new product is unoriginal, _____ (innovative). [4점]
